

Silvia Popova - assessment feedback

Introduction:

Undertaking the HBO-ICT study program has been an enlightening experience filled with challenges, self-growth, and invaluable insights. I would love to share my reevaluation of the feedback, information, and experiences gathered in the past weeks.

Information and Experience Gathering:

The first month of the ICT study program was filled with various ways to gather both feedback and knowledge. The first PCO showcase stands out for me as an amazing experience. The connection between the opinions of lecturers, student assistants, and peers provided a unique way to collect advice on how to enlarge my knowledge. The positive feedback I received was very encouraging! The grand lectures, the follow-up skills labs, and checkpoint activities have further helped me develop. I fully support the structure of the program - it allows you to ask your lecturers, learn the basic concepts together with them and then dive deeper by researching and practising alone.

Feedback Processing:

Reviewing and analyzing feedback has been vital for my development this month. The atmosphere in HZ UAS is defined by friendliness and a genuine willingness to help. Lecturers have delivered unique insights into complex topics, and student assistants have also managed to explain any possible issues and guide me through the difficulties that will present themselves throughout the course. The friendship among peers is also significant - I am genuinely surprised by the welcoming nature of the atmosphere and the support all of them give to fellow students.

Conclusion:

In conclusion, the HBO ICT study program is undeniably the right fit for me as it combines logical thinking, problem-solving, and teamwork - all vital skills that align with my will to succeed in the dynamic field of IT, particularly in the motorsport industry. This ICT program aligns with my goals and motivates me to continue my personal development!
