#Using external files

#The essentials

The MUSTs about this topic, explained as clear as possible

☐ Nothing essential. Just know that Laravel makes it easy to read and write files to (server) local and other file systems easy

#Digging deeper

The SHOULDs about this topic, described as links with some extra information to help understanding the content of the link

☐ Mention 'filesystem abstraction'; the keyword in Laravel for file storage

☐ Basics about the path and reading files

☐ I.e. for seeding

☐ Use the filesystem

☐ Talk about reading CSV data. Maybe talk about the CSV seeder

#Further reading

The MAYs about this topic. Just inspiration and links

☐ Ditto with JSON

- [ ] Trick for the seeding of posts (folder with html files, filename=title, content=body)
- [ ] Idea: file uploading
